Problem Statement

Context

ShareChat and Moj are India's leading homegrown social media platforms, primarily serving young users from Tier-2 and Tier-3 towns. These platforms cater to users who prefer regional languages and culturally relevant content, and they play a significant role in content consumption, self-expression, and social sharing for this demographic.

Despite the widespread adoption of global social media platforms such as Instagram, Snapchat, and YouTube, several needs of Tier-2 young users (aged 16–25) remain either under-served or unsatisfactorily addressed.

Objective

Your task is to conceptualize an innovative product or product proposition that ShareChat or Moj should build to better address the unmet needs, challenges, or aspirations of young users (16–25 years) from Tier-2 Indian towns such as Patna, Siliguri, Vijayawada, Mysore, and similar cities.

The proposed solution should:

- Be meaningfully differentiated from existing global social platforms
- Solve a real, clearly defined user problem for this cohort
- Have the potential to scale to 30–50 million users in India within the next 1–2 years

Key Areas to Explore

Participants are expected to develop a deep understanding of the target user group and explore the following:

- **User Cohort Definition**

Identify a specific cohort within the broader 16–25 age group in Tier-2 Indian towns, along with their context, aspirations, and digital behavior.

- **Use-Cases, Motivations & Pain Points**

Clearly articulate the core use-cases and underlying motivations for which users turn to social media, and the key pain points they experience while doing so.

- **Current Solutions & Workarounds**

Analyze how these users currently attempt to address these needs using existing social media platforms such as Instagram, Snapchat, YouTube, or other digital tools, including any

informal or inefficient workarounds.

- **Gaps in Existing Platforms**

Explain why current solutions on platforms like Instagram, Snapchat, and YouTube do not fully or satisfactorily solve these needs for Tier-2 young users, considering factors such as cultural relevance, language, accessibility, discovery, or engagement depth.

Expected Submission Components

Your submission should clearly and concisely address the following aspects:

- **User Problem(s)**

Identify and articulate the key problem(s) faced by young Tier-2 users in their social media usage today.

- **Use-Cases & Context**

Explain when, why, and how frequently users encounter this problem, and assess the depth and intensity of the pain point.

- **Market Potential (TAM)**

Estimate the size of the user base that experiences this problem and could benefit from the proposed solution.

ROUND-1

Expected Submission Components

- **Proposed Solution**

Describe your product or feature in detail, highlighting its core value proposition and key functional elements.

- **Growth & Adoption Strategy**

Outline a high-level go-to-market or launch plan explaining how you would drive awareness, adoption, and reach approximately 10 million users within the first year.

- **Success Metrics**

Define the key metrics or indicators you would track to evaluate whether the solution is effectively solving the identified problem.

- **Risks & Constraints**

Identify potential challenges, risks, or limitations that could hinder adoption, scalability, or long-term success.

- **[Optional] High-Level Wireframes**

Visual or conceptual wireframes to illustrate the user experience and product flow.

ROUND-1

About ShareChat & Moj (Reference Information)

- ShareChat and Moj together form India's largest homegrown social media ecosystem, with approximately 100 million daily active users.
- On average, users spend around 30 minutes per day on the platforms, with the majority of time spent consuming short-form video content.
- A significant secondary use-case involves discovering content and sharing it externally, especially on WhatsApp Status, Stories, and Channels. Nearly 30–50% of users share content daily.
- The primary audience comprises users aged 16–35 years from Tier-2 and Tier-3 towns such as Patna, Jalandhar, Puri, and Vellore.
- Nearly 50% of users consume content exclusively in their regional language, having set their native language as the default within the app.
- ShareChat has recently pioneered and scaled micro-dramas in India through fast-paced, vertical, full-screen storytelling formats consisting of 80–100 minute narratives broken into engaging 1–2 minute episodes with auto-scroll.
